Dear Sir

Wheal Benny Concentrate

My directors have drawn my attention to the fact
that our assay is ^{25.2 O₂} 24.37 percent ^{3.75 O₂} Fe in 1.26 which is much higher
than your assay. They consider that they are unable to accept
your offer, particularly as you make no mention of the tin
contained in the concentrates.

Apologies for not writing before

Yours faithfully

J. H. Harris - James
