Josiah Paull, Esq.,
South Crofty Mine, Ltd.,
CARN BREA, S.O.

Dear Mr. Paull,

No doubt you will be pleased to know that we have at last come across a steel which we have given a thorough trial, and find it very superior to any other mining drill steel. It is very soft and easy for the blacksmiths to work, in fact, with the hand steel you have to slightly temper the heads of the drills to prevent the steel beating back rapidly. I think it will pay you to order a couple of hundredweight to make a trial.

The sole object of my writing this letter is that you might find the use of this steel very beneficial in your mine, as we are doing here, and I might say the breakages of drills with this steel have been reduced to a considerable extent. The address of the firm and the make of the steel is as follows.—

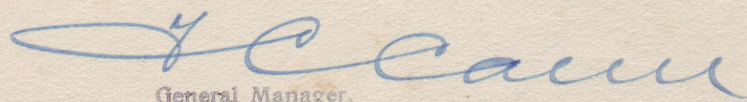

The Cobalt Products Co., Ladysbridge, Sheffield.

"KOPRO" Special Drill Steel Non-Tempering.

Yours faithfully,

For and on behalf of

GEEVOR TIN MINES LIMITED.

General Manager.
