A Gazetteer to the Metal Mines of Scotland

INTRODUCTION
This is the fourth edition of this work. I have checked most of my original references and located further mines and trials using the internet. I hope that I have been able to provide more accurate map references. However, most of the entries have only a six figure map references and so may be a little way off. I have given some of the Loch Fyne mines names of my own choosing as the original references used only letters and numbers on a map which I have not reproduced, I have enclosed the name in quotes (‘ ‘) where this has been done.

As I have not visited all of the sites there may well be inaccuracies. Please feel free to use the ‘Aditnow’ web site to make any corrections.

For the purpose of this Gazetteer, the definition of a mine or trial is an underground working. Where, during my search of the literature I have come across ore bodies worked by opencast or quarrying, I have included them and mentioned this in the NOTES. I have not included gold unless it appears in my original reference, but have included other minerals as I have come across them. Also I have not included all the individual mines for Leadhills and Wanlochhead.

Spellings of place names etc may have changed through time, where this occurs I have used the spelling in the REFERENCE.

Please note:

Many of the mine sites listed are well over 100 years old and the evidence still visible on the ground may be inconclusive especially in the case of the small mines and trials, others, however, are very obvious.

There is no Law of Trespass in Scotland, except for aggravated trespass where damage is done. Although this means that the public are free to roam, it is always worth asking permission to visit a site whenever possible.
The entry headings used in this Gazetteer are:

**NAME:** Entry is in alphabetical order by mine name. The name used is that which appears in the reference that was used to initially locate the mine or trial.

**ALTERNATIVE NAME:** Any alternative names found are followed by its reference in brackets.

**LOCATION:** I have attempted to make this as useful as possible by giving the position relative to easily found towns, villages, hills or farms. However, there are a few that it has been necessary to mark ‘Not Known’.

**COUNTY:** This is the correct county name at the time of going to press.

**MAP:** Three maps are given.

E: Explorer map, correct at the time of going to press

P: Pathfinder map

6”: The old series 6” map

If the mine appears on any of these maps, it is included in the NOTES.

**MAP REFERENCE:** There are three possibilities.

1. Not known
2. A single map reference giving the location of the mine. Where the site is a large complex the map reference will locate the main area.
3. Where I have identified individual features, the location of adits, shafts etc, I have given individual map references for each of the main features, separated by ‘and’.

**MINERAL:** This is the principal mineral in which the mine was most productive. It may not be the mineral for which it was best known for.

**DATE VISITED:** Provided for your use.

**REFERENCE:** References are given in the Appendix

**NOTES:** Additional information.

**APPENDIX:** References
Use of Web sites  There are many good web sites available. Of particular help are:

Aditnow:  http://aditnow.co.uk/  It is well worth registering to get full use of the site as it is being updated regularly.

The National Library of Scotland: http://maps.nls.uk/. This is valuable for viewing the old 6” OS maps. These are best viewed ‘zoomable’.

The Canmore site: www.rcahms.gov.uk/canmore.html . This gives some good information. I have included the Canmore ID number as a reference where used and find that this is best used in an ‘Advanced Search’.

Acknowledgements

I am very grateful to a number of people who have made this publication possible: My brother Peter for his encouragement and hard work in entering all the data into his computer for both the first and second editions; Richard Gillanders, the Archivist of the British Geological Society (BGS) Edinburgh, for his encouragement and practical assistance; Andy Grout and Gordon Sutherland who provided valuable information; the librarians of BGS for so cheerfully providing me the many books I requested; the librarians of the Map Room of The National Library of Scotland; the Museum of Lead Mining at Wanlochhead for publishing this work; Geoff Downs-Rose and his wife Zoë for their encouragement, tea and soup; the lunch time coffee drinkers who put up with all my chatter for some considerable time; Jeff Thom for entering all the data into his computer for the third edition; the Edinburgh Regional Computing Centre, Reprographics Department, Kings Buildings, Mayfield Road, Edinburgh, EH9 3JU for printing editions 1, 2 and 3.

For this fourth edition I am very grateful to Jeff Thom for typing the main text and references into a form suitable to produce the PDF file, and to Meg Barrowman for typing the introduction. Many thanks for all your help.
